

School Stories scope of work

Why it matters for schools

- A school's social media is the first place most families look - before the open day, the enrolment form, or ever visiting
- A quiet or neglected channel reads as a quiet school; an active, responsive one signals a thriving community
- Perception drives enrolment, and enrolment shapes funding, staffing, and community confidence
- School Stories turns a school's channels into a living front door - without adding to staff workload

What School Stories is

- A done-for-you social storytelling and community-management program
- We run the strategy, create the content, manage the conversations, and report on what's working
- Built on four pillars: Strategy, Storytelling, Community, and Proof

Scope of work

1. Content strategy & planning
 - Content calendar mapped to the school term, key events, and enrolment periods
 - Content pillars and messaging tailored to the school's brand, voice, and community
 - Channel strategy across the platforms that matter most (Facebook, Instagram, and others as relevant)
2. Content creation & production
 - Strategic posts designed to be seen and shared - not just filled in for the sake of posting
 - Short-form video and reels capturing school life, events, and culture (2-3 shoot visits per term)
 - Photography direction and editing, captions, and on-brand graphics
 - A consistent posting cadence so the channel never goes quiet
3. Community management & responsiveness
 - Weekly monitoring and moderation of comments and messages
 - Warm, timely responses that show the school is present and listening
 - Flagging and escalation of anything sensitive, so the school stays in control
 - Turning the channel into a genuine two-way line with families
4. Channel setup & optimisation
 - Profile, bio, and page setup or refresh so the channel looks credible at first glance

- Best-practice settings for reach, accessibility, and discoverability

5. Reporting & insights

- At the end of the term you receive a snapshot of growth, reach, and engagement
- What worked, what to do more of, and recommendations for the month ahead

Proof: Concord West Public School

- Grew Facebook following from 14 to 130 in two weeks - a 9x increase
- Driven by a couple of strategic posts, not by flooding the feed
- Every comment and message moderated and answered, showing a school that listens and cares
- Shifted the page from a noticeboard nobody read into a real communication channel

What we measure

- Follower growth - the clearest sign interest in the school is rising
- Reach & impressions - how many people are actually seeing the school each week
- Engagement rate - likes, comments, shares, and saves
- Response time & rate - the clearest signal of a school that cares
- Content performance - which stories resonate most
- Posting consistency - a steady cadence that keeps the school top of mind

How it works

- Onboarding: a short kick-off to learn the school's voice, calendar, and priorities
- Light-touch input: the school shares key dates and the occasional moment; we handle the rest
- Always-on management: channels monitored and managed throughout the week
- Everything delivered under the school's own brand - to families, it looks like the school doing it brilliantly
